

ASKOLL EVA QUALITY AND ENVIRONMENTAL POLICY

Askoll EVA is convinced of the supremacy of its products and technologies: the innovative solutions, in their management and operation, allow for saving energy and raw materials, safeguarding the environment, increasing comfort and safety, and thus improving the quality of life.

For this reason, it uses an Integrated Quality and Environment Management System compliant with the international standards UNI EN ISO 9001:2015 and UNI EN ISO 14001:2015, and with this document highlights its guidelines concerning quality and the protection of the environment to disseminate and share its principles.

Askoll products are the result of teamwork, a composite commitment at all levels, stimulated and supported by the environment in which it is performed, the resources made available, and the methods in which it is developed.

The mission that Askoll EVA supports is attention to all parts of the system, not only to profit and quantity but also to people and the **protection of the environment**, to offer value and well-being to customers, collaborators and suppliers and the entire community and **territory**:

- to the customer, who must always be satisfied with us for the quality, service, and price and for a well-prepared, competent and attentive partner in creating a reliable and safe product.
- to the end customer, who will purchase and use the Askoll product or which contains our technology and who must be satisfied with the performance, reliability and safety. Our product requires particular attention in all phases of its creation, from design to assembly, storage, transport, and assistance.
- to the supplier. Many of our Suppliers have grown with us, following us in the evolution. Askoll believes in the importance of support and encouragement in the improvement of its partners. Reliable and **qualified suppliers, sensitive to environmental issues** and who share our **quality and ecological sustainability** objectives, are key to our success.
- to all collaborators who work in the company: we know that the most precious resources are the human ones. We believe that at the basis of every business success, there is the man and the values attributable to him, therefore we believe in the creativity and skills of each of us. There is a mutual commitment; the company pays attention to each worker's health, safety and security and offers opportunities for professional growth and involvement. Each of us contributes to the empowerment and awareness of ourselves and the people we work with.
- to the environment and the community by **respecting and guaranteeing the continuous updating of the legislation on the environment, responsibly managing all the environmental aspects applicable to the company and making each worker aware of adopting responsible behaviour that complies with the legislation and company procedures. Continuous improvement objectives on ecological performance are defined and periodically reviewed, such as the reduction and efficiency of energy and raw material consumption. The decision to create a company system for calculating climate-changing emissions (Carbon footprint) linked to products within the framework defined by the ISO 14067 standard also goes in this direction. The ISO 14067 standard introduced the CFP**

Systematic Approach (CFP-SA) of an organization, which consists of the set of processes and activities of the organization, defined in specific procedures and aimed at independently developing the Carbon Footprint of individual products or services. The recovery and recycling of waste are encouraged, entrusting its recovery to duly authorized transporters and destination plants.

The quality of our product, the ability to make it, and the punctuality of its deliveries, can also be guaranteed by our organization which is equipped with adequate tools, machinery and software integrated into a healthy and functional work environment.

The Certification of the Quality and **Environmental** Management System, according to the ISO 9001 and **ISO 14001:2015** standards, guarantees quality and **environmental sustainability** and acts as an additional stimulus to keep attention high. The level of activities to pursue the objectives of the **Quality and Environment** Policy.

Askoll EVA, as a vehicle manufacturer and holder of European type-approval certificates, considers the legislative and/or regulatory requirements applicable to its products, particularly regarding the conditions of the regulation (EU) 168/2013.

Note: The Quality and Environment Objectives, consistent with the Policy and duly objectified, constitute a document separated from this Manual and are managed by ASKOLL EVA by the requirements of the UNI EN ISO 9001:2015 and 14001:2015 Standards
